

**BATTERY POWERED DEVICE INCLUDING A BATTERY TERMINAL
CONFIGURED TO RECEIVE AN AUXILIARY POWER PLUG**

5

ABSTRACT OF THE DISCLOSURE

A battery powered device, such as a breast pump, that includes a battery terminal that is configured to also serve a receptacle for an auxiliary power cord. The battery powered device also includes a battery stop that allows a pin, which is
10 configured to receive the auxiliary power cord, to also serve as a battery terminal. More specifically, the battery stop prevents a user from over-inserting the battery into the battery cavity and thereby breaking or bending the battery terminal, which is typically configured as a pin that also functions as a male receptacle for the auxiliary power cord. In this manner, the battery stop allows the same pin to serve as the
15 battery terminal and as a male contact for the auxiliary power cord receptacle without exposing the pin to damage from over-insertion of the battery into the battery cavity.
